

31 July 2023

Dadabhoy Institute of Higher Education
c/o Dr. Fahad Farooq Lasi
Director, Quality Enhancement Cell

Dadabhoy Institute of Higher Education,

I am pleased to provide this letter certifying that **Dadabhoy Institute of Higher Education** is a participating institution of the Environmental Physiotherapy Agenda 2023.

The EPT Agenda 2023 (<https://eptagenda2023.com/>) is a global call to action aiming at the integration of planetary health, environmental and sustainability education into physiotherapy training. Beyond a call to action, the EPT Agenda 2023 is also a collaborative project aiming at the creation of an online, open-access inspiration-base for environmental physiotherapy education and accompanying academic publications. This inspiration-base will serve as an invaluable tool and foundation for the further development of planetary health, sustainable development, and environmental physiotherapy education around the world.

As a participating institution **Dadabhoy Institute of Higher Education** will be involved in:

- a. Committing to a process of beginning to integrate planetary health, environmental and sustainability perspectives into the undergraduate physiotherapy program.
- b. Joining a collaborative network of participating institutions that are sharing ideas with and helping each other and the broader PT world in all this, also by developing an open-access environmental physiotherapy education inspiration-base.

We look forward to working with you!

Filip Maric (PhD)
Associate Professor, UiT The Arctic University of Norway
Founder and Executive Chair of the Environmental Physiotherapy Association
